

VIREN SINGH

| Student | Aspiring Computer Science Researcher
thakurvirensingh1@gmail.com | +91 7082149379 |

SUMMARY

Aspiring business and disciplined student with experience in organizational coordination ,teamwork and well able to code and express my ideas. Very much interested in artificial intelligence and in the machine learning platforms . I enjoy combining logical thinking , reserch ,development and teamwork to create system that solve practical challenges & improve how the people intract with technology . I always been interested in understanding how the technology and artificial intelligence can help human to solve the real world practical problems and this my interest grew over time into building the project such as my resQnet .

PROJECTS

resQnet

- resQnet this project is exactly the program which solves the real world problem
- It includes mapping which shows the fastest route possible to be used for emergency
- The project use JavaScript and frontend technologies as the Github pages does not host the backends
- It has build-in routing systems, hazard overlays and resource management systems

NexusML

- NexusML is an interactive machine learning platform which is focused on practical understanding of ML concepts through system design.
- I built this project because I was interested in making machine learning more understandable and so interactive for the students
- This helps learners having a mindset like me maybe can explore the project and can build their own

Aegis-Atlas

- Aegis-Atlas is a platform which is focused on scientific models , visualization and research based learning
- It includes multi-dimensional features such as the 3D model which covers all the standard physics and chemistry discovery and research .
- I built this project because I was interested in combining technology and learning into one platform with useful features for the learners & students .
- This project helps learners explore scientific concepts and understand them in more simple and practical way

EDUCATION

S.B.S senior secondary school , karnal

Physics , Chemistry , Mathematics

- Current acedmic performance :- 94.7%.
- Pridicted grade 12th score :- 97.3%

Certification & Extracurricular

Stanford online and deeplearning :- (machine learning specialization)

- overall grade(average from all 3 modules) :- 98.53%

Stanford online :- (Probabilistic Graphical Models)

- overall grade(average from all 3 modules) :- 98.53%

National Cadet Corps :- (NCC(A) & CATC 114 (Combine anual training camp))

- overall grade :- Exemplary

KEY SKILLS

- Coding
- Teamwork
- System building
- Data Visualization
- Problem-Solving
- AI System Development
